

<p>Browsing, and General Web Usage.</p> <hr/> <p>Suggested Speed: 5Mbps</p> <hr/> <p>Current Speed: 0.9Mbps</p>	<p>Usage of the Internet Browser</p> <p><u>1. General Browsing</u> Browsing can currently be slow and tedious, especially as a lot of websites now have high graphic and media contents, Eg, Flash.</p> <p><u>2. Watching A Brief Clip on the BBC' Website.</u> Watching even the lowest quality of clips can take some time, with pausing, buffering and lag.</p> <p><u>3. Watching A Youtube Video in Standard Definition @ 380p</u> It can currently take a long time to watch a normal video on youtube.</p>
<p>Future Ready</p> <hr/> <p>Suggested Speed: 80Mbps</p> <hr/> <p>Current Speed: 0.9Mbps</p>	<p>3D / YouTube 4K - None of these are possible with our current connection.</p> <p><u>1. 3DTV</u> For the future 3DTV may require double the stream of a Blu-Ray quality HD Movie.</p> <p><u>2. YouTube 4K HD</u> YouTubes New 4K High Definition Format offers the highest resolution high definition video currently available online.</p> <p><u>3. Graphic Design Sharing</u> High Quality Graphic Transfers using sites such as DeviantArt.com</p>
<p>Multiple Users.</p> <hr/> <p>Suggested Speed: 100Mbps</p> <hr/> <p>Current Speed: 0.9Mbps</p>	<p>Increased Loading Times.</p> <p><u>1. Extremely Slow</u> When Multiple users are online, the internet speed is significantly further reduced from what small amount we have at the moment.</p> <p>1Mbps, to be shared between 4 people, One who is downloading Game Updates, Software updates, Movies and Music, Another who is downloading documents, and emails, uploading attachments and having a video conference. Another who is Browsing the internet, Streaming Music of Spotify and downloading a few songs, with the occasional streamed video. And another person online gaming in the lounge, whilst the PS3 Has to do a 'Necessary' Update. with it lagging everywhere.</p>
